EXERCISE

JOURNALING

Exercise Files

*Starter – n/a**Answers – n/a*

Exercise Mission

n/a

Synopsis

In this exercise, we will experiment with recording and playing back a journal.

Prerequisites

1. *ch1_001.pdf "Using The Kit"*

Exercises

1. *Record The Journal (pg 2)*
2. *Play The Journal (pg 2)*

JOURNALING

1 Record The Journal

Please open a command window and change directory into the root directory of your Kit. Then, please type the following command into the command window.

Windows Users

```
torqueDemo.exe -jSave myJournal.jrn
```

OSX Users

EFM OSX Executable Not Ready Yet EFM
This will be fixed when I convert this to PDF.

Now, feel free to run any of the exercises and missions that you wish. Do this for a few minutes and then exit the kit by quitting.

2 Play The Journal

In the same command window from the recording session, please type the following command.

Windows Users

```
torqueDemo.exe -jPlay myJournal.jrn
```

OSX Users

EFM OSX Executable Not Ready Yet EFM
This will be fixed when I convert this to PDF.

As soon as you press return, you should observe the Kit loading and following the exact sequence of events that you ran through during the recording session.

That's about all there is to it. Now, combined with other debug techniques, you have a sure fire way to reproduce errors, simply by recording them and replaying them.
