RELOADERS

1 My First Reloader

Finished Code:

```
function rldDebugging002()
{
    exec("./exercise002.cs");
}
```

Answers:

1. The string "Hello world!" is printed to the console.

2. The same message is printed to the screen. (We didn't reload the script yet!)

3. When the reloader is run, we get an error message saying there is an error on line 21. (Your line number may vary.) When the test script is run, we still get "Hello world!"

4. No, because there was an error, the file does not get reloaded.

5. The strings "Hello world!" and "Torque is awesome!" get printed to the screen.
